

MARC III

Maryland Transit Authority's MARC III railcars were overhauled by Alstom (formerly Bombardier). The overhaul included upgrading all lamps within the car, including the emergency back up lamps throughout the vehicle.

Using LED Smart's RLP-120V and RLP-72V lights systems, plus various other mini lamp products. The overhaul also included updating the old and yellowed fixture lenses, which were damaged by exposure to the old fluorescent systems and sunlight.

The cars are clean, bright and safe for all users, for years to come.
